PROFESSIONAL SUMMARY

Software Engineer with over 4 years of experience in Android app development using native languages and game development with the Unity engine. Skilled at working both independently and collaboratively in agile environments.

KEY SKILLS

Programming Languages:

Machine Learning: **Python** for **LLMs** and **Computer Vision models**
Mobile Dev: **Java**, **Kotlin** for **Android app development**
Web & Game Dev: **JavaScript** (**React.js**, **Express.js**), **C#** (**Unity**)
IoT and Embedded Systems: **Verilog**, **VHDL**, **Assembly (8086)**, **C**

DevOps & Tools:

Version Control: **Git**
API & Testing: **REST**, **GraphQL**, **Postman**
Databases**: MySQL**, **PostgreSQL**, **MongoDB**, **Firebase**
Containerization: **Docker**

EDUCATION

Bachelor of Science in Computer Engineering **09/2019 - 02/2024**

Iran University of Science and Technology

*One of the top 5 public universities in Iran, with a **QS ranking of 436**.*

***GPA**: **3.87/4.0** (**18.12/20.0**) Ranked among the top **10** in my class*

PROFESSIONAL EXPERIENCE

Game Developer **08/2021 - 10/2023**

JellyLand Studio

A startup founded by Computer Engineering students focused on developing mobile games, supported by IUST and Medrick

- Fixed **dependency issues** by **refactoring code** and restructuring **architecture**, resulting in a **30%** improvement in **Scalability**
- Implemented **team-based features** enabling players to **form and collaborate in teams**, significantly **enhancing player interaction and engagement**
- Designed a **chat system** using **WebSocket** for **real-time communication**, allowing players to collaborate with each other
- Executed **CI/CD pipelines** to **streamline product builds**, enabling **stakeholders** to access and review the latest updates with more efficiency
- Delivered tasks under **high-pressure situations** by managing tasks and maintaining consistent adherence to tight deadlines
- Resolved numerous **bugs and issues**, ensuring smooth and **error-free gameplay**

PROJECTS

Android Secure SMS-Based Employee Check-In/Check-Out | Git Link

- Developed a secure SMS-based employee check-in/check-out system with **encryption**, **data integrity checks**, and **acknowledgment mechanisms (ACK)**.
- Utilized **SMPP**, **Android SMS Manager**, and **GSM technologies** with limited documentation to develop a **cost-effective** solution, **eliminating** the need for external SMS gateways

Open Understand | Git Link

- Contributed to an **open-source code analysis tool** inspired by **OpenUnderstand**, enabling **100+** developers to **improve code maintainability** by providing insights into their codebase
- Created a tool to parse the codebase with **ANTLR** and generate an **abstract syntax tree (AST)**
- Extracted **essential entities** such as **packages, classes,** and **methods** from the **codebase** and stored them as records in a database

ADDITIONAL WORK EXPERIENCE

Android Developer **02/2020 - 04/2020**

Android Raya College Bootcamp

The Bootcamp in partnership with University of Science and Technology (IUST)

- Made **10+** mini-apps using **APIs**, **Firebase**, and **Android's built-in services**, enhancing development expertise and integration capabilities
- Developed a user-friendly mobile shopping app for easy clothing purchases and an accompanying **admin panel** enabling shop owners to efficiently manage product inventory
